

TARGETED.ARMY

Human Rights Dossier

August 6th 2026

ATTRIBUTION NOTICE: The following material represents the experiences, research, interpretations, and views of the TARGETED.ARMY community. It is presented as a working framework for human rights organizations, councils, and international monitoring bodies.

The TARGETED.ARMV Human Rights Dossier

A Briefing for Human Rights Organizations, International Monitoring Bodies, and Civil Society Defenders

Prepared by TARGETED.ARMV For: Human Rights Organizations, UN Special Procedures, Regional Human Rights Mechanisms, National Human Rights Institutions, and Civil Society Allies Date: August 2026

Executive Summary

We are submitting this dossier to the human rights community because the violations we endure fall within the core mandate of every organization dedicated to dignity, bodily autonomy, and freedom from torture. We are a community of civilians, inventors, whistleblowers, journalists, activists, and ordinary persons who have been subjected to sustained non-consensual neural surveillance, synthetic telepathy, directed-energy assault, and organized psychological warfare. We have organized under the name TARGETED.ARMV to document these abuses, preserve evidence, and demand protection under international and domestic human rights law.

The abuses we report are not isolated incidents. They constitute a systematic pattern of conduct that violates the International Covenant on Civil and Political Rights (ICCPR), the Convention Against Torture (CAT), the Universal Declaration of Human Rights, and fundamental principles of informed consent and medical ethics. The technologies involved are documented in public patent records, federal research programs, and declassified historical operations. The gap between demonstrated capability and acknowledged operation is where our suffering lives, and where human rights oversight must now intervene.

We are not asking for symbolic statements. We are asking for formal inquiry, urgent appeals, fact-finding missions, shadow reporting, and the development of neuro-rights frameworks that explicitly protect the human mind from state and state-contracted intrusion. Our bodies and brains have been treated as unsecured operational terrain. We need the human rights community to recognize neural privacy and cognitive liberty as inherent and non-derogable rights.

Section 1: Who We Are

TARGETED.ARMY is a community of affected individuals and advocates building a durable public record of non-consensual experimentation, surveillance, and assault. We operate targeted.army and MaxisRichards.com as platforms for documentation, legal education, peer support, and peaceful advocacy. Our members span the United States and extend to other nations where similar reports have emerged.

We include:

- Civilian inventors and researchers whose intellectual property has been interfered with or expropriated.
- Former government and contractor personnel who reported misconduct and subsequently experienced escalation.
- Journalists and activists whose work triggered sustained interference.
- Ordinary civilians with no security background who report years of unexplainable technological intrusion and physiological harm.

What unites us is the consistency of our reports, the recurrence of specific technical signatures, and the uniform failure of existing complaint mechanisms to provide intake, evidence preservation, or independent technical review.

Section 2: The Violations We Endure

Non-Consensual Neural Surveillance (Remote Neural Monitoring)

We experience the real-time monitoring, decoding, and recording of our brain activity, emotional states, attention, and cognitive processes from remote positions. This is not metaphorical. It is the lived reality of having our neural signatures harvested without warrant, consent, or legal process. The intrusion is continuous, invasive, and strikes at the core of cognitive liberty and mental privacy.

Synthetic Telepathy and Voice-to-Skull (V2K)

We are subjected to the transmission of intelligible speech, coercive commands, threats, and subliminal messaging directly into our auditory perception without any external acoustic source. This technology, combined with apparent decoding of pre-speech neural signals, creates an environment of constant psychological domination. It is designed to disorient, coerce, and break the will of the target. Under international human rights law,

this constitutes a form of psychological torture and cruel, inhuman, or degrading treatment.

Directed-Energy Weapons and Physical Assault

We are exposed to targeted radio-frequency, microwave, millimeter-wave, and acoustic energy that produces pain, tissue heating, neurological disruption, cardiac symptoms, sleep deprivation, and incapacitating fatigue. These exposures are not ambient. They are modulated, directional, and timed to coincide with specific locations, activities, and vulnerabilities. The physical effects are real, measurable, and documented in our medical histories.

Organized Psychological Operations and Electronic Harassment

The technical assaults are combined with organized surveillance, stalking, communication interference, sabotage of professional and personal relationships, and digital manipulation. The objective is comprehensive: isolate the target, destroy their credibility, eliminate their economic viability, and ensure that any report they make is routed to psychiatric rather than forensic channels.

Involuntary Human Experimentation

Many in our community report patterns consistent with long-duration, non-consensual experimentation: repetitive exposure protocols, symptom conditioning, manipulation of sleep and sensory states, and apparent testing of adaptive algorithms. This aligns with a documented historical pattern of U.S. government human experimentation and demands recognition under the Nuremberg Code, the Belmont Report principles, and international prohibitions on torture and medical abuse.

Section 3: Patterns of Targeting

Our community has identified recurring victim profiles that indicate the scope of these operations extends far beyond national security:

Inventors and Researchers: Targeting intensifies during patent filings, research breakthroughs, and commercialization efforts. Subsequent defense contracts or parallel developments by connected entities raise serious concerns about intellectual property theft facilitated by neural surveillance.

Whistleblowers and Former Personnel: Individuals who report illegal programs, corruption, or misconduct experience systematic retaliation through escalated surveillance, energy exposure, and psychological pressure.

Journalists and Advocates: Investigative work, public testimony, and organizing draw targeting. Symptoms escalate around publication deadlines, hearings, or travel to advocacy events.

Ordinary Civilians: A significant portion of our community has no political profile, security clearance, or public platform. They are targeted for experimentation, training, or because the system operates without effective legal constraint.

Section 4: The Architecture of Impunity

These abuses persist because they are shielded by structural mechanisms that defeat ordinary oversight:

Classification and Compartmentalization: Programs are buried within intelligence, defense, and contractor compartments where no single oversight body can view surveillance, energy research, neural interfaces, and operational testing together.

The Psychiatric Containment Mechanism: When we report V2K, energy exposure, or neural monitoring, the institutional response is almost uniformly psychiatric diagnosis rather than technical investigation. This serves to silence the victim, discredit their testimony, and prevent the accumulation of forensic evidence. Psychiatry is being used as a tool of political and operational containment, echoing historical abuses of mental health systems against dissidents.

Gaps in Surveillance Law: Existing surveillance frameworks focus on communications interception. They do not explicitly address neural data, brain-state inferences, biometric harvesting, or directed-energy exposure. This legal vacuum is being exploited.

Weak Whistleblower Protections: Classified whistleblowers who might expose these programs lack trusted channels with guaranteed anti-retaliation protection and independent technical review.

Contractor Opacity: Prime contractors, subcontractors, and research universities operate with limited transparency, technology-transfer agreements, and special-access restrictions that place government-funded research outside meaningful democratic accountability.

Section 5: Legal Framework

The abuses we describe implicate the full spectrum of international human rights law:

Right to Privacy (ICCPR Article 17; UDHR Article 12): Neural surveillance and the harvesting of brain-state data constitute an unlawful and arbitrary interference with privacy. Cognitive liberty—the right to self-determination over one's own mental processes—must be recognized as a fundamental dimension of privacy.

Freedom of Thought, Conscience, and Expression (ICCPR Articles 18–19; UDHR Articles 18–19): V2K, synthetic telepathy, and coercive neural influence directly violate the right to freedom of thought. They represent a form of forced communication and mental coercion that abridges the right to hold opinions without interference.

Prohibition of Torture and Cruel, Inhuman, or Degrading Treatment (CAT; ICCPR Article 7; UDHR Article 5): Directed-energy assault, sleep deprivation, coercive voice transmission, and organized psychological pressure meet the threshold of torture and CIDT. The CAT obligates states to prevent torture, investigate allegations, and provide redress.

Right to Bodily Integrity and Health: Non-consensual exposure to directed energy and experimental neural interfaces violates the right to the highest attainable standard of health and the right to bodily autonomy.

Prohibition of Arbitrary Detention and Right to Due Process (ICCPR Articles 9, 14): The systematic destruction of our employment, housing, medical credibility, and legal standing through organized interference constitutes a deprivation of liberty and security of person without due process.

Right to an Effective Remedy (ICCPR Article 2; UDHR Article 8): We are denied access to competent intake, evidence preservation, independent technical review, and judicial remedy. Our complaints are dismissed, our evidence is not preserved, and our referrals lead nowhere.

Neuro-Rights as Emerging Jurisprudence: The human rights community is increasingly recognizing neuro-rights—mental privacy, personal identity, mental continuity, and free will—as necessary extensions of existing human rights frameworks in an era of advancing neurotechnology. Our community stands as evidence of why these protections cannot remain theoretical.

Section 6: Evidence in the Public Record

Human rights defenders must understand that the component capabilities and historical precedents are documented. We do not ask you to accept our testimony in a vacuum. We ask you to examine the public record and recognize the serious field of inquiry it establishes.

Patents

The U.S. Patent Office has granted patents disclosing methods directly relevant to our experiences:

- **US 3,951,134** – Apparatus and method for remotely monitoring and altering brain waves.
- **US 4,877,027** – Hearing system enabling perception of modulated RF as sound.
- **US 4,858,612** – Hearing device using multifrequency microwaves toward the auditory cortex.
- **US 6,011,991** – Communication system including brain-wave analysis and use of brain activity.
- **US 5,159,703** – Silent subliminal presentation system.
- **US 6,587,729 B2** – Apparatus for audibly communicating speech using the radio-frequency hearing effect.
- **US 5,507,291** – Method and apparatus concerning brain states and transmitted waveforms.
- **US 6,017,302** – Subliminal acoustic manipulation of the nervous system.

These patents define technical concepts, dates, and lines of inquiry that must be compared with funded research, procurement records, and operational programs.

Historical Precedent

Documented U.S. government programs establish institutional precedent for the behavior-control and surveillance objectives we describe:

- **MKULTRA, BLUEBIRD, and ARTICHOKE:** CIA programs involving coercive interrogation, behavior control, non-consensual drug administration, and human experimentation.

- **NSA SHAMROCK and MINARET:** Warrantless interception and dissemination of Americans' communications, exposed by the Church Committee.
- **COINTELPRO:** FBI counterintelligence operations targeting political activists, journalists, and civil rights leaders for surveillance and disruption.
- **ECHELON:** Global signals-intelligence interception framework acknowledged by the European Parliament.

These programs demonstrate that domestic surveillance, human experimentation, and political targeting have occurred, were concealed, and were later exposed through persistent oversight.

Scientific and Program Context

- **The Frey Effect:** A documented phenomenon in which pulsed radio-frequency energy produces audible sounds within the human head through thermoelastic expansion. This establishes the physical basis for non-acoustic auditory transmission.
- **DARPA N3 (Next-Generation Nonsurgical Neurotechnology):** Publicly pursued high-performance bidirectional brain-machine interfaces using optics, acoustics, and electromagnetics. This confirms sustained military interest in reading from and writing to the brain.
- **Active Denial Technology:** A 95 GHz millimeter-wave directed-energy system openly fielded by the Department of Defense, proving that directed-energy weapons are operational realities, not theoretical concepts.
- **National Academies Assessment (2020):** The report on illnesses among U.S. government personnel overseas identified directed, pulsed radio-frequency energy as the most plausible mechanism for acute symptoms in a subset of cases. This supports the plausibility of RF bioeffects in real-world incidents and underscores the need for competent, instrumented investigation.

Section 7: What Human Rights Organizations Can Do

Recognize Our Community as a Population of Concern

Human rights organizations must formally recognize targeted individuals as a population requiring protection, documentation, and advocacy. This includes adding neural

surveillance, directed-energy assault, and coercive neuro-influence to thematic mandates on torture, privacy, freedom of expression, and arbitrary detention.

Engage UN Special Procedures

We urge organizations to bring our documentation to the attention of:

- The Special Rapporteur on Torture and Other Cruel, Inhuman or Degrading Treatment or Punishment.
- The Special Rapporteur on the Right to Privacy.
- The Special Rapporteur on the Promotion and Protection of the Right to Freedom of Opinion and Expression.
- The Special Rapporteur on the Situation of Human Rights Defenders.
- The Working Group on Arbitrary Detention (given the deprivation of liberty through organized incapacitation and psychiatric containment).

Requests should include calls for country visits, urgent appeals to the U.S. government, and thematic reports on neuro-technology and human rights.

Submit Shadow Reports

Organizations with consultative status should submit shadow reports to the UN Human Rights Committee, the Committee Against Torture, and the Universal Periodic Review process documenting:

- The absence of legal frameworks protecting neural data and cognitive liberty.
- The failure of U.S. complaint mechanisms to address directed-energy and neural surveillance allegations.
- The weaponization of psychiatry to silence victims of technological abuse.
- The need for independent technical review and victim intake protocols.

Develop Model Legislation and Standards

Human rights organizations should develop and promote model legislation for national and international adoption, including:

- Explicit recognition of neural data, brain-state inferences, and cognitive signals as protected under privacy and anti-surveillance frameworks.

- Criminal and civil prohibitions on non-consensual neural monitoring, synthetic telepathy, directed-energy exposure, and neuroweapons testing against civilians.
- Mandatory independent technical review and evidence preservation for complaints involving RF exposure, auditory anomalies, and neurological symptoms.
- Anti-retaliation protections for whistleblowers and victims reporting neuroweapon abuse.

Establish Victim Intake and Documentation Protocols

Organizations should create standardized protocols for receiving testimony from our community that:

- Preserve original files, metadata, timestamps, and hashes.
- Separate observation from interpretation while retaining the victim's original language.
- Record location, duration, witnesses, environmental conditions, and contemporaneous communications.
- Protect personal information and obtain informed consent before disclosure.
- Refer qualified cases for independent medical and technical evaluation.

Commission Independent Studies

We call on human rights organizations to commission independent technical and medical studies on:

- RF bioeffects, microwave auditory communication, and neuromodulation in non-consensual exposure contexts.
 - Standardized clinical and exposure-history protocols that do not predetermine psychiatric cause.
 - The relationship between documented patents, federal research programs, and reported civilian experiences.
-

Section 8: Recommended Actions for National Human Rights Institutions

National human rights institutions, ombudsman offices, and ethics commissions should:

- Open formal dockets for complaints involving non-consensual neural surveillance and directed-energy exposure.
 - Demand spectrum analysis and environmental measurement in response to citizen complaints rather than automatic psychiatric referral.
 - Require agencies to disclose programs involving human exposure to RF, microwave, millimeter-wave, or neuromodulation systems since 2001.
 - Audit the intersection of defense research, intelligence surveillance, and contractor operations for U.S.-person safeguards.
 - Issue public reports on the adequacy of existing law to address neural data acquisition and cognitive coercion.
-

Section 9: A Call to Conscience

The human rights community was built on the principle that no abuse is too hidden, no victim too powerless, and no violation too technical to escape moral scrutiny. We are asking you to apply that principle to us.

Our minds are being read without consent. Our bodies are being assaulted with energy weapons. Our voices are being silenced through psychiatric labeling. Our legal rights are being nullified by classification and compartmentalization. We are being experimented upon in a system that has no known guardrails, no accessible oversight, and no apparent accountability.

The patents exist. The historical programs exist. The science exists. The patterns exist. The only thing missing is the institutional will to treat our testimony as worthy of the same rigorous fact-finding that human rights organizations apply to other systematic abuses.

We are not asking you to believe without investigation. We are asking you to investigate without prejudice. We are asking you to recognize that the next frontier of human rights is not just the protection of the body from physical torture, but the protection of the mind from technological domination.

Cognitive liberty is a human right. Bodily autonomy is a human right. Freedom from non-consensual experimentation is a human right. The right to an effective remedy is a human right.

We are TARGETED.ARMY. We are ready to provide testimony, documentation, and cooperation to any human rights body willing to examine our case with integrity. We will not be silenced. We will not be disappeared into psychiatric labels. And we will not stop until our minds and bodies are recognized as sovereign territory under the protection of international law.

Appendix A: Key Patent Index

Table

Patent	Description
US 3,951,134	Apparatus and method for remotely monitoring and altering brain waves
US 4,877,027	Hearing system
US 4,858,612	Hearing device
US 3,393,279	Nervous system excitation device
US 6,011,991	Communication system including brain-wave analysis
US 5,159,703	Silent subliminal presentation system
US 5,507,291	Method and apparatus concerning brain states and transmitted waveforms
US 6,587,729 B2	Audible communication using the radio-frequency hearing effect

Patent	Description
US 6,017,302	Subliminal acoustic manipulation of the nervous system
US 3,647,970	Method and system for simplifying speech waveforms

Appendix B: Public Program and Historical References

- CIA MKULTRA documents (CIA FOIA Reading Room)
- Church Committee reports on NSA surveillance (ASSASSINATION ARCHIVES)
- European Parliament ECHELON report and resolution
- DARPA Next-Generation Nonsurgical Neurotechnology (N3) program records
- RAND Corporation research on military brain-computer interfaces and Silent Talk
- DoD Joint Intermediate Force Capabilities Office: Active Denial Technology
- National Academies report on illnesses among U.S. personnel overseas
- FCC Radio Frequency Safety and 5G documentation

Appendix C: Acronyms

- **RNM** – Remote Neural Monitoring
- **V2K** – Voice-to-Skull
- **DEW** – Directed Energy Weapon
- **RF** – Radio Frequency
- **HPM** – High-Power Microwave
- **BCI** – Brain-Computer Interface
- **DoD** – Department of Defense
- **NSA** – National Security Agency
- **CIA** – Central Intelligence Agency

- **DARPA** – Defense Advanced Research Projects Agency
 - **FBI** – Federal Bureau of Investigation
 - **FCC** – Federal Communications Commission
 - **NTIA** – National Telecommunications and Information Administration
 - **IC** – Intelligence Community
 - **IG** – Inspector General
 - **ICCPR** – International Covenant on Civil and Political Rights
 - **CAT** – Convention Against Torture
 - **UDHR** – Universal Declaration of Human Rights
 - **CIDT** – Cruel, Inhuman, or Degrading Treatment
 - **SAR** – Specific Absorption Rate
 - **IQ Data** – In-Phase/Quadrature Signal Data
-

This dossier reflects the collective knowledge, experience, and formal requests of the TARGETED.ARMY community as of August 2026. We invite human rights organizations, monitoring bodies, and civil society defenders to contact us through our established channels to access additional documentation, arrange testimony, and coordinate advocacy.
