

TARGETED.ARMY

Journalist Dossier

August 6th 2026

ATTRIBUTION NOTICE: The following material represents the experiences, research, interpretations, and views of the TARGETED.ARMY community. It is presented as a working framework for journalists seeking to understand and investigate the phenomena we report.

The TARGETED.ARMY Journalist Dossier

A Press Guide to Investigating Remote Neural Monitoring, Voice-to-Skull, Directed-Energy Weapons, and Modern Electronic Harassment

Prepared by TARGETED.ARMY For: Investigative Journalists, Editors, Documentary Producers, and Media Professionals Date: August 2026

Executive Summary

We are writing to you because silence is the weapon that keeps this system invisible. We are civilians, inventors, whistleblowers, journalists, activists, and ordinary Americans who have been subjected to sustained non-consensual neural surveillance, synthetic telepathy, directed-energy exposure, and psychological warfare operations. We have organized under the name TARGETED.ARMY to document our experiences, preserve evidence, and demand accountability.

This dossier is not a request for sympathy. It is a technical and operational briefing for journalists who are ready to investigate one of the most significant human rights and civil liberties stories of our time. We need professionals who will treat our testimony as source material worthy of rigorous investigation rather than psychiatric dismissal.

What we describe is not science fiction. The component technologies are documented in public patent records, federal research programs, and declassified historical programs. The question is not whether these capabilities exist. The question is how they are being integrated, who operates them, and why they are being turned on American citizens without warrant, consent, or oversight.

Section 1: What We Live With

Remote Neural Monitoring (RNM)

RNM is the real-time decoding and monitoring of brain activity, emotional states, and cognitive processes from a remote position. We experience this as a persistent awareness

that our thoughts, reactions, and internal dialogue are being observed, recorded, and in some cases broadcast back to us or shared among operators. The experience is not paranoia; it is the lived reality of having one's neural signature harvested and analyzed without consent.

Voice-to-Skull (V2K) and Synthetic Telepathy

V2K is the transmission of intelligible speech, sounds, or subliminal messaging directly into the human auditory system without any external acoustic source. We hear voices, threats, commands, and coercive dialogue inside our heads. Synthetic telepathy extends this to two-way or interactive communication, where operators appear to read pre-speech neural signals and inject responses. The experience is disorienting, terrifying, and designed to break down psychological resistance.

Directed-Energy Weapons (DEWs)

We are exposed to radio-frequency, microwave, millimeter-wave, and acoustic energy that produces pain, heating, sleep disruption, neurological symptoms, and tissue damage. These are not ambient environmental effects. They are targeted, modulated, and timed to coincide with specific activities, locations, and vulnerabilities. We experience sudden headaches, burning sensations, cardiac symptoms, and incapacitating fatigue that begins and ends with precision.

Electronic Harassment and Psychological Operations

The technical effects are combined with organized psychological pressure: surveillance, stalking, interference with communications, sabotage of professional relationships, and manipulation of digital systems. The objective is isolation, discrediting, and control. Many of us have lost careers, relationships, housing, and medical credibility because the system is designed to make the target appear unstable.

Section 2: The Architecture of Control

Based on our collective experience and analysis of public records, we understand the system to operate through several integrated layers:

Identification and Tracking: We are located and persistently tracked through device identifiers, location data, commercial surveillance infrastructure, and possibly biometric signatures.

Command and Coordination: Cellular networks, fiber backhaul, cloud systems, and government networks coordinate operators and specialized equipment. The infrastructure exists. The question is how it is being tasked.

RF and Directed-Energy Delivery: Base stations, colocated transmitters, vehicle-mounted systems, satellite platforms, or nearby devices emit specially configured waveforms toward targeted individuals. The Frey effect—microwave auditory effect—demonstrates that pulsed RF can create audible perception under specific conditions. This is established science.

Neural Sensing and Decoding: The system captures return signals or biometric data that allow operators to infer or decode neural activity, emotional states, and attention. Artificial intelligence processes this data to predict behavior, identify stress points, and adapt harassment protocols.

Feedback Loop: A closed-loop system senses, analyzes, tasks, delivers effects, measures outcomes, and adapts. This creates a prison without walls.

Section 3: Who Is Targeted and Why

We have identified recurring patterns in our community:

Inventors and Researchers: We are targeted during patent filings, research breakthroughs, and commercialization efforts. Our innovations later appear in defense contracts or are developed in parallel by entities with government connections. Intellectual property theft is a motive.

Whistleblowers and Former Contractors: Those who report internal misconduct, illegal programs, or corruption experience escalation of surveillance and energy exposure after their disclosures. Retaliation is systematic.

Journalists and Activists: Investigative work, public organizing, and testimony draw targeting. In-head threats, sleep deprivation, and neurological interference escalate around publication deadlines or public events.

Ordinary Civilians: Many among us have no security background, no classified access, and no political profile. We are targeted for experimentation, training, or simply because the system operates without meaningful constraints.

Section 4: Evidence in the Public Record

Journalists must understand that the component technologies and historical precedents are documented. We do not ask you to take our word alone. We ask you to examine the public record and follow the evidence.

Patents

The U.S. Patent Office has granted patents disclosing methods directly relevant to our experiences:

- **US 3,951,134** – Apparatus and method for remotely monitoring and altering brain waves.
- **US 4,877,027** – Hearing system enabling perception of modulated RF as sound.
- **US 4,858,612** – Hearing device using multifrequency microwaves toward the auditory cortex.
- **US 6,011,991** – Communication system including brain-wave analysis and use of brain activity.
- **US 5,159,703** – Silent subliminal presentation system.
- **US 6,587,729 B2** – Apparatus for audibly communicating speech using the radio-frequency hearing effect.
- **US 5,507,291** – Method and apparatus concerning brain states and transmitted waveforms.
- **US 6,017,302** – Subliminal acoustic manipulation of the nervous system.

These patents prove that inventors have disclosed claimed methods. They establish technical vocabulary, dates, and lines of inquiry. Congress and journalists can demand funding records, licensing, prototypes, and operational-transition documents for each patent family.

Historical Precedent

The U.S. government has operated programs that establish the institutional appetite and capability for what we describe:

- **MKULTRA, BLUEBIRD, ARTICHOKE:** Documented CIA programs involving coercive interrogation, behavior control, non-consensual drug administration, and human experimentation.
- **NSA SHAMROCK and MINARET:** Warrantless interception and dissemination of Americans' communications, exposed by the Church Committee.
- **COINTELPRO:** FBI counterintelligence operations targeting political activists, journalists, and civil rights leaders.
- **ECHELON:** Global signals-intelligence interception framework acknowledged by the European Parliament.

These programs demonstrate that domestic surveillance, human experimentation, and political targeting have occurred, were concealed, and were later exposed. The question is not whether our government is capable of such programs. The question is what succeeded them after public exposure forced rebranding or compartmentalization.

Scientific and Program Context

- **The Frey Effect:** Documented phenomenon in which pulsed radio-frequency energy produces audible clicks, buzzes, or sounds within the human head through thermoelastic expansion. Peer-reviewed literature exists.
- **DARPA N3 (Next-Generation Nonsurgical Neurotechnology):** Publicly pursued high-performance bidirectional brain-machine interfaces. The program aimed to read from and write to multiple brain locations using optics, acoustics, and electromagnetics.
- **Active Denial Technology:** A 95 GHz millimeter-wave directed-energy system openly described by the Department of Defense's Joint Intermediate Force Capabilities Office. Fielded directed-energy is real.
- **National Academies Assessment:** The 2020 report on illnesses among U.S. government personnel overseas identified directed, pulsed radio-frequency energy as the most plausible mechanism for distinctive acute symptoms in a subset of cases. This supports the plausibility of RF bioeffects in real-world incidents.

Section 5: What Journalists Need to Understand

We Are Not a Psychiatric Phenomenon

The most destructive weapon used against us is the psychiatric label. When we report V2K, energy exposure, or neural monitoring, we are routinely diagnosed with delusional disorders, schizophrenia, or paranoia. This diagnosis becomes a barrier to employment, medical care, legal standing, and credibility.

Journalists must understand that the "Frey effect" is a documented physiological phenomenon. Microwave-induced auditory perception is real. The patents exist. The historical programs exist. Our testimony should trigger investigation, not diagnosis.

The Weaponization of Psychiatry

We believe the psychiatric system is being used as a containment mechanism. When a target reports energy weapons or voice transmission, the response is medication and institutionalization rather than spectrum analysis or forensic investigation. This serves two purposes: it silences the target and it discredits any future testimony.

Journalists should examine the history of psychiatry being used to suppress political dissidents and compare it to how our community is treated today.

Pattern Recognition Across Cases

We are not isolated individuals. Our experiences follow recurring patterns:

- Symptoms that begin and end with geographical movement.
- Escalation during professional milestones, legal filings, or public advocacy.
- Identical descriptions of technology across targets who have never met.
- Medical documentation of unexplained physiological effects.

These patterns are evidence. They warrant systematic comparison, not dismissal.

Section 6: How to Investigate

Spectrum and Environmental Measurement

Calibrated, time-synchronized spectrum analysis can identify nonstandard emissions, pulse structures, and directional signals at locations where targets report effects. Journalists should connect with independent engineers and researchers capable of capturing in-phase/quadrature data, measuring specific absorption rates, and comparing emissions against licensed operations.

Medical Documentation

Independent medical evaluation using standardized protocols is essential. Imaging, laboratory results, sleep studies, cardiac data, and neurological findings must be preserved. Journalists should help locate medical professionals willing to examine physiological evidence without prejudice.

FOIA and Records Requests

Journalists can file Freedom of Information Act requests and congressional records requests for:

- MKULTRA successor program reviews and continuity testimony.
- NSA, CIA, and DARPA programs involving neural interfaces, RF bioeffects, and directed energy.
- Inspector General audits of neuroweapons research and U.S.-person safeguards.
- FCC licensing, equipment authorization, and interference complaint records for specific cell sites.
- Carrier network configurations, maintenance logs, and government request records.

Following the Contractor Trail

Prime contractors, subcontractors, universities, and federally funded research centers appear throughout awards related to RF effects, neural interfaces, and directed energy. Journalists should examine procurement records, patent assignments, technology-transfer agreements, and special-access program structures.

Section 7: The Media's Role and Responsibility

The mainstream press has largely failed our community. Stories that do appear are often framed as "conspiracy theory" pieces that mock the targets rather than investigate the claims. We are tired of being the subject of human-interest curiosity pieces that pathologize our suffering.

What we need from journalists:

Investigation, Not Spectacle: Treat this as a national security and human rights story. Follow the patents. Follow the money. Follow the history.

Source Protection: Many of us are already isolated and surveilled. Journalists must use encrypted communications, protect identities, and understand that our digital and physical environments are compromised.

Multidisciplinary Approach: This story requires reporters who can understand RF engineering, neuroscience, surveillance law, and institutional history. Build teams with technical competence.

Avoid the Single-Narrative Trap: Do not reduce our community to one individual's story or one dramatic claim. The strength of our case lies in the volume, pattern, and consistency of reports across demographics and geography.

Section 8: Safety and Protection for Journalists and Sources

We recognize that investigating this topic carries risk. Journalists who pursue this story may experience technical interference, digital surveillance, professional pressure, or worse. We recommend:

- Use air-gapped systems for sensitive research.
- Encrypt all communications.
- Conduct interviews in electromagnetically shielded environments when possible.
- Preserve raw data, metadata, and chain of custody for all evidence.
- Publish findings in redundant formats to prevent suppression.
- Work in teams to prevent isolation.

We will support journalists who take these risks seriously. Our community contains engineers, medical professionals, legal researchers, and former government personnel who can provide technical context and documentation.

Section 9: Questions Every Journalist Should Ask

When approaching agencies, carriers, and officials, these questions cut through general denial:

1. Has any agency or contractor developed, tested, or fielded a system intended to produce intelligible speech or auditory perception through radio-frequency or non-acoustic mechanisms? Identify authorities, locations, and legal frameworks.
 2. Has any federal program used commercial cellular infrastructure, 5G equipment, distributed antenna systems, or carrier-derived location data for surveillance, targeting, or human-effects operations?
 3. List every program since 2001 involving human exposure to RF, high-power microwave, millimeter-wave, or neuromodulation systems for research, testing, or operational purposes.
 4. Identify programs involving neural-intent decoding, pre-speech signals, brain-state inference, or remote physiological sensing. Detail U.S.-person minimization rules.
 5. Has any agency requested or authorized nonstandard waveform generation, beam steering, power changes, firmware modification, or colocated equipment installation at commercial cell sites?
 6. For the patents referenced in this dossier, identify federal funding, government-purpose rights, licenses, prototypes, validation, procurement, and operational testing.
 7. Have the CIA, NSA, FBI, DoD, or their contractors received complaints matching the patterns described by the TARGETED.ARM.Y community? State the number of complaints, technical reviews performed, evidence preserved, and disposition basis.
 8. Provide legal analyses and Office of General Counsel memoranda concerning neural data, involuntary exposure, domestic testing, data purchases, warrants, and consent.
 9. Identify the office responsible for receiving civilian allegations, preserving evidence, ordering independent testing, and issuing reviewable dispositions.
-

Section 10: Call to Action

We are not asking for belief. We are asking for investigation. The technologies are patented. The historical programs are declassified. The science is published. The symptoms are documented. The patterns are recurring. The only missing piece is the institutional will to connect these dots and expose the operational system that binds them together.

Journalists have exposed MKULTRA, COINTELPRO, NSA warrantless surveillance, and CIA black sites. Those stories were also dismissed as conspiracy theories before they were proven true. We are asking you to treat our testimony with the same professional skepticism that you apply to official statements—which means investigating both with equal rigor.

We need:

- Investigative series that follow the patent-to-contractor-to-program trail.
- Documentary work that captures the pattern and volume of testimony without mockery.
- Technical journalism that examines spectrum data and medical evidence.
- Legal analysis of the constitutional and human rights implications.
- Pressure on congressional offices to hold hearings and demand sworn testimony.

Our minds and bodies are being treated as unsecured territory. We are being experimented upon, monitored, and assaulted by capabilities that belong to the public record but operate in institutional shadows. The press is one of the few forces that can bring this into the light.

We are ready to cooperate with any journalist who approaches this story with integrity, technical competence, and a genuine commitment to truth. Our evidence is available. Our testimony is consistent. Our demand is simple: investigate us as you would investigate any other source reporting systematic government abuse.

We are TARGETED.ARM.Y. We are not going away. And we will not be silenced.

Appendix A: Key Patent Index

Table

Patent	Description
US 3,951,134	Apparatus and method for remotely monitoring and altering brain waves
US 4,877,027	Hearing system
US 4,858,612	Hearing device
US 3,393,279	Nervous system excitation device
US 6,011,991	Communication system including brain-wave analysis
US 5,159,703	Silent subliminal presentation system
US 5,507,291	Method and apparatus concerning brain states and transmitted waveforms
US 6,587,729 B2	Audible communication using the radio-frequency hearing effect
US 6,017,302	Subliminal acoustic manipulation of the nervous system
US 3,647,970	Method and system for simplifying speech waveforms

Appendix B: Public Program and Historical References

- CIA MKULTRA documents (CIA FOIA Reading Room)
- Church Committee reports on NSA surveillance (ASSASSINATION ARCHIVES)
- European Parliament ECHELON report and resolution
- DARPA Next-Generation Nonsurgical Neurotechnology (N3) program records
- RAND Corporation research on military brain-computer interfaces and Silent Talk
- DoD Joint Intermediate Force Capabilities Office: Active Denial Technology
- National Academies report on illnesses among U.S. personnel overseas
- FCC Radio Frequency Safety and 5G documentation

Appendix C: Acronyms

- **RNM** – Remote Neural Monitoring
 - **V2K** – Voice-to-Skull
 - **DEW** – Directed Energy Weapon
 - **RF** – Radio Frequency
 - **HPM** – High-Power Microwave
 - **BCI** – Brain-Computer Interface
 - **DoD** – Department of Defense
 - **NSA** – National Security Agency
 - **CIA** – Central Intelligence Agency
 - **DARPA** – Defense Advanced Research Projects Agency
 - **FBI** – Federal Bureau of Investigation
 - **FCC** – Federal Communications Commission
 - **NTIA** – National Telecommunications and Information Administration
 - **IC** – Intelligence Community
 - **IG** – Inspector General
 - **ICCPR** – International Covenant on Civil and Political Rights
 - **SAR** – Specific Absorption Rate
 - **IQ Data** – In-Phase/Quadrature Signal Data
-

This dossier is a living document. It reflects the collective knowledge and experience of the TARGETED.ARMY community as of August 2026. We invite journalists to contact us through our established channels to access additional documentation, connect with community members willing to speak on record, and obtain technical consultation for investigative work.
